

**AURORA MULTIMEDIA Announces  
TAURI Temperature Sensing Tablet with Glory Star**

MORGANVILLE, NJ April 16th, 2020, — Aurora Multimedia Corp. introduces an AV industry first in collaboration with Glory Star™, a trusted partner for years. In Morganville, Aurora announces the TTS-10, an Android based all-in-one infrared temperature sensing tablet. It is offered in 10", 15.6", 21.5" size sensing tablets with a variety of stands, desktop, and wall mount options.

To ensure when people are entering a location they are not running a high temperature, the TTS-10 will provide alerts when a person is running a high temperature within 1 second from 3.3ft (1 meter) away. This provides the first layer of screening protection using a hygienic non-touch infrared technology. With its' Quad-core 1.8Ghz processor, Wi-Fi and Ethernet capabilities this is a must-have for any company on the forefront of protecting clients and customers from being exposed to potential illness from a fever induced individual.

The system uses an advanced algorithm for detecting and calculating heat signatures. Based on technology developed in Germany, the highly accurate sensor measures with a tolerance of +/- 0.5 degrees Celsius (+/- 0.9 degrees Fahrenheit).

Future firmware upgrade options will include Facial Recognition with customized flagging and ReAX IP Control. ReAX by Aurora can be integrated into almost any security system, health care system, door sensor(s), door release mechanism(s), lighting, and much more. While ReAX is a fully automated control platform, third party control systems will be able to interface as well.

"To make a leap in technology requires the strength of a partnership and cooperation of two or more companies to make real positive changes in the AV industry. "Working together with Glory Star, Tauri is the first-ever temperature sensing tablet. We want to do our part to help the world get back to the new norm as soon as possible." says Paul Harris CEO of Aurora.

## **About Aurora Multimedia**

Aurora Multimedia products incorporate state-of-the-art technologies that surpass typical specifications and features. From the introduction of the industry's first non-proprietary, Web-standards-based IP control systems and touch panels, to today's advanced HDBaseT™, SDVoE™, and IPBaseT® video distribution solutions – has made Aurora a dominant force in the AV industry. Advanced AV processors with scaling, multi-image rotation, and dual/quad display processing only add to our highly adaptive, diversified product line. Aurora provides solutions for a variety of global markets, including government, education, security, hospitality, corporate, and house of worship. [www.auroramm.com](http://www.auroramm.com)

## **About Glory Star**

Since 1984, Glory Star provides a broad selection of OEM kiosk tablets, commercial tablets, and all-in-one touch computers for different markets, including building automation, industrial automation, interactive kiosks, healthcare, office equipment, retail displays, transportation applications and point of sale devices. ## **About ReAX**

ReAX™ is the industry's first non-proprietary IP Control based on AV/IT industry standards. The name ReAX™ represents action/reaction which is the essence of control automation. ReAX™ is unique since it is not limited to a single manufacturer but to all who qualify. This is for the first-time, interoperability of not just protocols and structure, but the actual code itself. It is not limited there as IR libraries, macros, and more can all be shared and organized in a single location at the organizations' website [www.reax.org](http://www.reax.org)
